Q: Partial derivatives of $\ln(\cos(t)+\sin(t))$ I am asked to find the partial derivatives of $\ln(\cos(t)+\sin(t))$ but I don't know how to calculate this. Please help. A: Your function is $f(t) = \ln(\cos t + \sin t)$ Differentiating $\frac{d}{dt}f(t) = \frac{d}{dt}(\cos t + \sin t)^{-1} = \frac{1}{\cos t + \sin t} \cdot \frac{d}{dt}(\cos t + \sin t)$ Now, $\cos t = \frac{e^{it} + e^{-it}}{2} = \frac{e^{it} + e^{-it}}{2} \cdot 2i = e^{it} + e^{-it}$ and $\sin t = \frac{e^{it} - e^{-it}}{2i} = \frac{e^{it} - e^{-it}}{2i} \cdot 2i = \cos t \cdot 2i$ You can now expand everything and

"Although a lot of people think that a drum machine is only a drum machine, and not a sampling machine, with the right controls, it can certainly be used as a sample-based drum machine, just like a Roland D-20." "The Korg M3 includes the first true looping capabilities in a sampling drum machine with the LoopMorph technology" "When the Korg M3 was released, it brought a new sampling drum machine that used looping technology to a world that was just being introduced to looping technologies. And it did this in a way that few people would have been able to imagine." "Although the use of looping technology is not new, the Korg M3 brought looping technology to a new level, as it could store an unlimited number of loops in memory. "The Korg M3 was an instant hit, as it sold over 1 million units at launch and has since become the first and only drum machine that was able to make sampled drum loops a mainstream instrument. It has been used by a wide range of musicians and DJs, including world famous drummers like John Bonham and Stewart Copeland." "Not only that, it was also the first drum machine that could be used in one of the most popular drum sample series of all time, the Subsonic series." "Over time, the Korg M3 became the only drum machine that could be used with the Subsonic drum loops, until the release of the Subsonic M3." "Now that Subsonic M3 is the main sample series drum machine that Korg has made available, the M3 is now the official drum machine of Subsonic." "The Korg M3 is also the first ever drum machine that can be used with the PolyRack products." "Thanks to LoopMorph technology, the M3 was able to produce a better and more realistic drum sound than any

other drum machine, and all this at a very affordable price." "By combining a sampling drum machine with LoopMorph technology, Korg was able to deliver a sound that was closer to a live performance, and at an extremely affordable price."
