Contact with the Su-27s over the border appears to

have begun Sunday, shortly after Russian aircraft were detected in the same region on October 8. In one case, fighters were seen dropping bombs near the border from an altitude of over 10,000ft, local reports say. In the second instance, it seems that a pair of aircraft flew away from the border and then turned back, slowing as they approached the border. A similar pair of incidents last month left the US convinced that a Russian warplane had been based at a private airfield in the nearby Osterode district. In mid-September, after reports from several Ukrainian and western media sources that the Russians had been seen at Osterode, NATO's top military commander in Europe, General Philip

Breedlove, said that the alliance was "trying to confirm the facts" about the Russians' presence in the area. A further spike in the suspicion of Russian military activity in Osterode followed the news that Russia had stepped up its air and missile defence system in the region. The Defence Ministry's statement included a reference to a "fictitious system" that allowed "fixing" or repositioning aircraft and missiles
