The KEYMACRO scanner is a handy and reliable application for Mac users. It is simple and reliable in terms of operation and it is simple to use for an average Mac user. KEYMACRO features a simple and intuitive interface that has a home button on the top left side and a tabs bar on the right side with the scan option in it. KEYMACRO has been designed in such a way that the user can just click on the tabs bar to view the available options. Once the scan has been completed, the application displays the results on the results tab. What is KEYMACRO? KEYMACRO is an application that has been designed to detect keyloggers on Macs. KEYMACRO can be considered as the good man for detecting keyloggers on Mac computers. Keyloggers are malicious programs that record what users type into their computer. Often, keyloggers are installed on a user's computer without their knowledge or consent. Once installed, keyloggers collect the user's sensitive information and send it to the hackers. Keyloggers

are dangerous because they allow the hackers to record a user's keystrokes and gain access to their sensitive information. Hackers can also use the information to steal money or personal information. Keyloggers can infect any kind of Mac computer. Though the Mac OS is considered to be more secure than Windows, it can be exploited just as easily. KEYMACRO uses special features and techniques to detect keyloggers. It makes it possible for the user to scan their Mac safely and in a quick manner.

Features: • User-friendly application • Cross-platform compatibility • Simple installation • Quick and easy scan • Works in stealth mode • Safe and efficient • Supports all kinds of Mac OSX versions
How to scan • Run the application • Click on the “Scan for Keyloggers” button • Once the scan is complete, you will be asked to view your results on the “Results” tab. • After the scan is completed, the “Receive results” button appears on the main window. The user is only required to click on this button and wait until the scan is completed. • Now, you can view the results on the “Results” tab. The present invention relates to a new and distinct cultivar of Calibrachoa plant, botanically known as Calibrachoa sp. and hereinafter referred to by the name 'Duealkadu'. The new Calibrachoa plant is a product of a planned breeding program conducted by the Inventor in Rheinberg, Germany. The objective of the breeding program is to create new uniform Calibrachoa plants with large and attractive flowers. The new Calibrachoa plant originated from a cross-pollination made by the Inventor in July, 2015 in Rheinberg, Germany of a proprietary selection of Calibrachoa sp. identified as code number A10-00063-004, not patented, as the female, or seed, parent with a proprietary selection of Calibrachoa sp. identified as code number F-01-019, not patented, as the male, or pollen, parent. The new Calibrachoa plant was discovered and selected by the Inventor as a single flowering plant from within the progeny of the stated cross-pollination in a controlled greenhouse environment in Rheinberg, Germany in May, 2016. Asexual reproduction of the new Calibrachoa plant by vegetative terminal cuttings in a controlled greenhouse environment in Rheinberg, Germany since June, 2016 has shown that the unique features of this new Calibrachoa plant are stable and reproduced true to type in successive generations. What's New In USB Rectifier?

USB Rectifier is a simple tool developed as an accessible means of rectifying files from an infected USB drive. With it you are able to clean and recover documents which have been corrupted by viruses. An easy to use app with a straightforward interface USB Rectifier displays a user-friendly interface which makes it an appropriate tool for anyone, regardless of their experience with computers. It even comes with a section that describes how you use it step by step. All that you need to do in order to recover files is to select the target drive from the main window, click the 'Rectify' button and the application does the rest for you. There are no complicated menus or settings to go through and even the scan time is short. Delete shortcuts to prevent virus infiltration A way in which certain malware components and viruses make their way onto your computer is through shortcuts that link it to a connected USB device or memory card. To help you avoid a virus infestation of this sort, USB Rectifier comes with a 'Delete Shortcuts' feature that deletes all the existing shortcuts found on the selected drive. A basic tool for basic needs Though it's an advantage that it is simple in design, being light on features and options, not so much. Although, even that is easy to overlook as long as it does its job and helps you recover important files. Features: * Works without drivers * Easy to use and fast * 1 click recovery * Over 10 million users worldwide use this software to get rid of viruses on USB drives. Optimized for Windows XP, Vista and 7 The folder which contains the Virus is deleted from the folder after removal. Other features: * Deletes shortcuts * Restores the infected drive * Erases the drive * Recovers the documents Required permissions: Internet access Please read the Privacy Policy, Support and Contact Us section before purchasing.
