Q: Are there better options than Ruby for building a huge data processing system? One idea I've been toying with is to build an application that uses Ruby to allow users to run a variety of different types of scripts. I can't quite get into it because the idea is such a massive undertaking (and ultimately without a purpose) it's hard to see if it's a good idea. I'm wondering if there are better solutions than Ruby to actually power such a large system, as it seems to me that it's the wrong tool for the job? So for example, if I were going to build this (hypothetical) system, what would be the advantages of using Ruby instead of Python, PHP or Java? Or even C++? A: It depends on the problem. If you're after performance you'd go Java for sure. There are many optimization tools in Java to make your code run fast. I'd use Python over Ruby for the simple user interface. Python is much easier to write for GUIs and doesn't assume procedural code style. You could write all the backend of your application in Ruby. A: In terms of having an user interface, Java is the best option. It would be fast, as you'd be programming in C/C++. But in terms of creating a massive amount of data and processing it, Ruby would be the best option, simply because of the amount of libraries available. As for how "heavy" Ruby is, you can always compile it down for use on an embedded device. I do use both Ruby and Python for various things, though it'd be a real pain to switch between Ruby and Python for some things. A: If you want something that is easy to use, use Ruby. If you want something that is ready-made, use PHP. If you want something that is fast and easy to use, use Java. If you want something that is really fast, use C++. If you want something that is built in-house, use C#. If you want something that is complete, use something else. There is no single best language. The trick is finding what fits your problem the best. Ruby is good for GUIs. PHP is good for data/code processing. Java is good for everything, and has a lot of support, and can be used from the

Windies' bowling attacks battling for line-up 2 years ago Share Post Karachi: The West Indies would be looking to bounce back from two consecutive defeats in Test cricket against the reigning champions India when the two teams lock horns for the first Test of the two-match series here tomorrow. West Indies were heavily beaten by India in the first Test at Nagpur but bounced back spectacularly in the second Test at Guyana with a comprehensive eight wicket victory. The West Indies have a good bowling attack which includes medium-pacers Chris Gayle, Ramnaresh Sarwan and the emergence of Andre Russell. Their batsmen all score well against India. West Indies batsman Brian Lara, who is fifth on the all-time Test scoring list, still had high hopes that his side would meet India in the final Test and "hopefully we can give them a good go" in the Abu Dhabi Test. "The last time we were beaten by India in the final Test of a series was in 1989-90. Unfortunately for us we didn't play in the series in 1990-91 but we played in 1991-92 and the series was drawn," Lara said. "So I would like to say that hopefully we can give them a good go in the final Test and hopefully we can give them a good go with Chris Gayle and Andre Russell," Lara added. West Indies batting mainstay and captain Darren Sammy was also full of praise for the side. "We have a great challenge ahead of us. We are going to have to be really focused for this Test match, the target will be a very challenging one," Sammy said. "We have a very good Test side that will give the Indian bowlers a good fight. India have been a very tough opponent over the last four or five years. The pitch will be good for batting," Sammy added. West Indies have a lot of respect for India's bowling attack with their current captain, MS Dhoni, being one of the world's premier bowlers. "India has been one of the top five teams

and it's good the teams are so close, it will be interesting to see who goes on and who wins the Test series and how it pans out in the next couple of months," Dhoni said. "I know they have good players in the Test side and it will be a good battle as everyone is trying to win the series,"
