[FSX P3D] RF Scenery Building - Catania LICC Torrent

We hope you enjoy the new features that we would like to share with you. We have planned to build New Zealand in the next few months, we have recently worked on the wings of the island of New Zealand, including the sky, you can see in the screenshots, along with the New Zealand scenery in progress. If you wish to have some of the new features that we are working on we can keep you posted. If you are interested in such projects, please contact us and we would be glad to tell you more. For those who have installed the FSX BETA, if you have installed an application that changes the appearance of scenery, you should find that changes with the new build of the scenery as follows: 2. Remove the scenery package. So that the directory scenery can be deleted. *Select 'Yes' to confirm that the file name to be deleted is the same. 3. Install the scenery pack. *Select 'Yes' to accept the terms of use in the Installation option. X-EUROPE currently has 14 different countries, X-AMERICA, X-AFRICA and X-ASIA together with the buildings already exist in 4 different variants each (exactly 1052,646,638) are still to come, that will complete the landscape of the two continents. I think the most time-consuming and time-stressful part of the job is the preprocessing when selecting all the main building footprints and making OSM and MSBF images match. That required much more time than I ever expected to have to do, I could actually have finished the work years ago. But my wish was to do that, to create a full and complete scenery ready to use immediately, so the user can start to enjoy the scenery from the first flight.

[FSX P3D] RF Scenery Building - Catania LICC Torrent

One of the main challenges has been the generation of very complex buildings that do not yet exist in OSM. Because of large polygonal surfaces, the interior and exterior of the buildings are not compatible with the simple OSM style and not exportable directly to the scenery. Another challenge was that almost all the buildings did not exist in MSBF and often have several possible versions. Because of this, could be difficult to know which version, and so the multi-version of the same building. This was a real pain in the ass because it required much time because we worked with several OSM databases with different versions and not all of them shared their original version as a reference Sometimes it was necessary to build the buildings from scratch. At the end of the processing, we proceeded to extend and correct the OSM we had by adding a lot of data from MSBF and building the areas which were not in OSM, such as the Nice airport (classified as OC, area not covered by OSM), the Marignane airport (to be closed shortly) and then Rome. The Marignane and Rome airports were not classified but still added to the database without a specific match with an OSM database. At the end of the project, we added the Marignane airport again, even if it was already closed, to make a match with the MSBF dataset. Our goal was that the work would be as complete as possible, not only on paper, but also from the end user's point of view: We also have a lot of aerodromes, helipads, heliports and other objects from MSBF that we did not import to OSM, but this is the responsibility of the editor, before us we are just the highway to do this work. Finally, we also had an interesting luck because the weather would have been done now. 5ec8ef588b
